PREFACE.

The tracings from which these Etchings of Molluscous Animals have been taken, were originally made by Mrs. Gray, for my use, with the view of their being added to my collection of figures of Shells, and to aid me in their arrangement. Hoping that others may find such a collection of figures, (many of them copied from expensive works, and brought together from sources not easily accessible to Conchologists in general,) as useful as they have been to myself, I induced Mrs. Gray, to make slight etchings of them, which afforded her an interesting occupation during a period when she was confined to the house by ill health.

Some of the earlier figures, it should be stated, were taken from tracings made with no intention of their being copied, and intended only to represent the leading features of the original; and this circumstance will explain why in a few instances the etchings

do not convey all the characters of the original figure.

The Genera are arranged in accordance with the list printed in the "Synopsis of the contents of the British Museum," to which work the Student is referred for an explanation of the system adopted, and the characters of the families.

As the present work has been a labour of love, in order to bring it within the reach of Conchologists of limited means, it is published at the cost of paper and printing, with only the addition requisite to cover the retail profit of the bookseller.

A second series of plates is in hand and will be published at a future period.

Oliva.

Very peculiar from the acute reflected process in the front of the mantle (just behind the Syphon) which deposits the polished belt over the front of the Shell, and the thread-like elongation at the hinder angle, which forms the groove on the suture. The Shell is partly immersed in the large foot, which like the *Volutes* is deeply cut in on each side in front.

Ancillaria.

The shell is nearly sunk in the very large expanded foot of the animal, which is deeply cut in on each side in front. The syphon alone is exserted.
